Technology

- C#.NET, ASP.NET 4.0/4.5
- Windows Azure
- Microsoft Azure

Outcomes

- Richer data is available
- Enhance operational efficiency
- Maintain huge data of employee information

Case Study: Examination Management System

Summary – Our Client is full-service innovative and e-learning solutions enable companies across industries to impart impactful knowledge and learning experiences. They enables to work relentlessly towards creating the right kind of content that is best suited for both the organization and the learners’ requirements. They focus on creating innovative, customer-oriented software applications. These help their customers achieve and sustain high performance across a wide range of industries, from SMEs to large and public corporations.

Challenge – Our Client needed a technical platform that will allow all the Invigilator Module and Examination Management. The solution should be capable of handling multiple tenants. The solution has to be a cloud based solution in order to be accessed through multiple devices irrespective of their location. Our client conducted an extensive search of software development companies and chose Katpro as the most competent company in Cloud systems sphere.

Solution-

Katpro Technologies designed and developed Cloud-based Invigilator Module and Examination Management that was the primary platform to streamline and automate our client day-to-day business process. Admin and Invigilator are the two logins, Admin will login and allows Invigilator, and Invigilator takes the attendance and allows the system for each student for writing the exam. If any small practice occurred Invigilator has an access to give 3 warnings and finally block the students from writing the exam. Marks saved until after completed the exam.

Benefits-

The employees of our client were able to monitor their student Registration form and better Invigilator module.

- Richer data is available more quickly.
- Our client was able to maintain huge data of employee information.
- A model for enterprises and organizations

- Enhance operational efficiency
- Reduce deployment times and cost overheads
